# Alas Abiertas:

## Una Bienvenida de las Mariposas de Colombia

Colombia, un país privilegiado por su extraordinaria biodiversidad, alberga más de 3,950 especies de mariposas, de las cuales más de 220 son endémicas. Esta guía es un tributo a esa riqueza natural y al esfuerzo por documentar, a través de más de 13,200 fotografías, las siete familias de mariposas presentes en nuestro territorio. Sin embargo, más allá de su atractivo visual, esta obra busca un objetivo fundamental: promover el conocimiento como primer paso hacia la conservación.

Además de su evidente belleza, las mariposas y las polillas desempeñan un papel crucial en los ecosistemas, actuando como polinizadoras y como eslabones clave en la cadena alimenticia. Al alimentarse de néctar, transportan polen entre flores, ayudando a la reproducción de más del 80% de las plantas con flores, tanto silvestres como cultivadas. Este servicio ecológico no solo beneficia a las plantas, sino también a otros organismos que dependen de ellas para su supervivencia.

Las orugas de mariposas y polillas también son un recurso alimenticio esencial para aves, murciélagos y otros depredadores, especialmente en sus etapas tempranas de vida. Sin estos insectos, muchas especies animales y vegetales experimentarían un grave declive, afectando la biodiversidad en su conjunto. Por ello, las mariposas y polillas no solo son símbolos de belleza, sino guardianes del equilibrio ecológico.

El lanzamiento de esta guía electrónica coincide con un momento crucial para la biodiversidad colombiana, marcado por dos eventos significativos: La Conferencia de las Partes (COP16) sobre la Diversidad Biológica, que se celebrará en Cali, reuniendo a líderes mundiales comprometidos con la protección del medio ambiente y los 70 años de la Corporación Autónoma Regional del Valle del Cauca (CVC), institución que ha sido un pilar en la defensa de nuestros ecosistemas.

La decisión de presentar esta guía en formato digital no solo facilita su distribución gratuita, sino que también reduce el uso de recursos naturales, al evitar la impresión en papel. De esta manera, cualquier persona, en cualquier parte del mundo, puede acceder a este valioso recurso y, al mismo tiempo, contribuir a la preservación de nuestras mariposas.

Invitamos a los asistentes de la COP16 y a todos los lectores a reflexionar sobre la importancia de conocer y conservar la biodiversidad de sus entornos. La protección de estas especies es una responsabilidad que compartimos todos, y solo mediante el conocimiento y la concienciación podremos asegurar su supervivencia para las generaciones futuras.

**Marco Antonio Suárez Gutiérrez**

Director General

Corporación Autónoma Regional del Valle del Cauca, CVC

# Open Wings:

## A Welcome from the Butterflies of Colombia

### Open Wings: A Welcome from the Butterflies of Colombia

Colombia, a country privileged with extraordinary biodiversity, is home to over 3,950 species of butterflies, of which more than 220 are endemic. This guide is a tribute to that natural wealth and to the effort to document, through more than 13,200 photographs, the seven families of butterflies present in our territory. However, beyond its visual appeal, this work seeks a fundamental goal: to promote knowledge as the first step towards conservation.

In addition to their obvious beauty, butterflies and moths play a crucial role in ecosystems, acting as pollinators and as key links in the food chain. By feeding on nectar, they transport pollen between flowers, aiding in the reproduction of more than 80% of flowering plants, both wild and cultivated. This ecological service not only benefits the plants but also other organisms that depend on them for survival.

Butterfly and moth caterpillars are also an essential food resource for birds, bats, and other predators, especially in their early life stages. Without these insects, many animal and plant species would experience a severe decline, affecting biodiversity as a whole. Therefore, butterflies and moths are not only symbols of beauty but also guardians of ecological balance.

The release of this electronic guide coincides with a crucial moment for Colombian biodiversity, marked by two significant events: the 16th Conference of the Parties (COP16) on Biological Diversity, to be held in Cali, bringing together world leaders committed to environmental protection, and the 70th anniversary of the Regional Autonomous Corporation of the Cauca Valley (CVC), an institution that has been a pillar in the defense of our ecosystems.

The decision to present this guide in digital format not only facilitates its free distribution but also reduces the use of natural resources by avoiding paper printing. In this way, anyone, anywhere in the world, can access this valuable resource and, at the same time, contribute to the preservation of our butterflies.

We invite COP16 attendees and all readers to reflect on the importance of knowing and conserving the biodiversity of their surroundings. The protection of these species is a shared responsibility, and only through knowledge and awareness can we ensure their survival for future generations.

**Marco Antonio Suárez Gutiérrez**

General Director

Corporación Autónoma Regional del Valle del Cauca, CVC

# Introducción

## Introduction

Esta guía fotográfica de las mariposas de Colombia tiene como objetivo educar y concientizar sobre la importancia de estos insectos en el ecosistema y la necesidad de su conservación. Para ello, hemos recopilado información a partir de la base de datos BioButterfly, lo que nos ha permitido elaborar listados y guías no solo para Colombia, sino también para todo el Neotrópico, abarcando países y localidades específicas desde México hasta Argentina.

La guía incluye más de 13.200 fotografías, fruto del trabajo de campo de los autores durante más de 20 años, con la colaboración desinteresada de más de 640 fotógrafos que han cedido sus imágenes. Al final del documento, se encuentra un listado completo de todos aquellos que han contribuido con sus fotos, representando miles de horas de dedicación en el campo, un esfuerzo que, de otra forma, habría sido casi imposible de llevar a cabo.

Dado que la información sobre las mariposas está en constante evolución, consideramos que las versiones electrónicas son el medio más adecuado para recopilar y compartir este conocimiento. Además, al permitir generar listados y guías sin el costo de impresión cada vez que se necesite, este formato resulta ser el más práctico y ecológico. Esperamos que esta guía inspire la creación de muchas otras guías locales, facilitando la identificación de especies en áreas específicas y promoviendo

This photographic guide to the butterflies of Colombia aims to educate and raise awareness about the importance of these insects in the ecosystem and the need for their conservation. To achieve this, we have compiled information from the BioButterfly database, which has allowed us to create listings and guides not only for Colombia but also for the entire Neotropics, covering countries and specific locations from Mexico to Argentina.

The guide includes more than 13,200 photographs, the result of over 20 years of fieldwork by the authors, with the generous collaboration of more than 640 photographers who have generously contributed their images. At the end of the document, there is a complete list of all those who have contributed with their photos, representing thousands of hours of fieldwork that would have otherwise been nearly impossible to gather.

Given that information about butterflies is constantly evolving, we consider electronic versions to be the most suitable means to compile and share this knowledge. Furthermore, by allowing the generation of listings and guides without the cost of printing whenever needed, this format proves to be the most practical and eco-friendly. We hope this guide inspires the creation of many other local guides, facilitating the identification of species in specific areas and promoting both

tanto el turismo como la conservación de la naturaleza en cada región del país.

Para la presentación y diseño de este documento, hemos adoptado un formato que combina lo científico con lo didáctico, ya que el uso de fotografías busca atraer a un público más amplio. Nuestro objetivo es claro: comunicar para educar y conservar.

Si bien esta guía incluye una extensa colección de imágenes de mariposas colombianas, aún queda mucho por documentar. Para quienes deseen obtener información más completa, incluyendo las especies que no tienen fotografía, se puede acceder al listado completo de las mariposas de Colombia y del Neotrópico en <https://www.butterflycatalogs.com/>.

Esperamos que esta guía contribuya al conocimiento de las mariposas colombianas y fomente su observación, estudio, fotografía, disfrute y conservación.

tourism and nature conservation in each region of the country.

For the presentation and design of this document, we have adopted a format that combines scientific and educational elements, as the use of photographs aims to attract a broader audience. Our objective is clear: to communicate in order to educate and conserve.

Although this guide includes an extensive collection of images of Colombian butterflies, there is still much to document. For those interested in obtaining more complete information, including species that do not yet have photographs, the complete list of Colombian butterflies and the Neotropical butterfly list can be accessed at <https://www.butterflycatalogs.com/>.

We hope this guide contributes to the knowledge of Colombian butterflies and encourages their observation, study, photography, enjoyment, and conservation.

# Convenciones

## Keys

Para cada foto de una especie se trata de dar la mayor cantidad de información posible en el menor espacio, los números en azul significan:

For each photo of a species, it is about giving as much information as possible in the smallest space, the numbers in blue mean:

1 *Laothus gibberosa*  
 2 *Gibbosa*  
 5 PE-Qtz 1050m Nov15

♀ 3  
 DvG 4  
 CO-BO 6

1- Nombre científico	1- Scientific name
2- Nombre anterior	2- Previous name
3- Sexo	3- Sex
4- Fotógrafo	4- Photographer
5- Información de la foto	5- Photo information
6- Rango geográfico	6- Geographic range
7- Secuencia de la foto	7- Photo sequence

## 1 Nombre científico

El nombre científico con género, especie y subespecie cuando sea posible.

Los nombres científicos con el género y **sp** corresponden a especies que tienen una identificación desconocida o dudosa, ya que puede haber varias especies con dudas será **sp1**, **sp2**, etc., una vez que se identifique positivamente, la **sp** se cambiará al nombre correcto de la especie.

En el caso de especies no descritas para la ciencia, que todavía no tienen nombre, colocamos **sp nov**. Por favor, si puede ayudarnos a completar o corregir, escríbanos a los contactos.

En muchos lugares hay especies sin identificación positiva, preferimos colocar fotos de estas especies para que se sepa que esta especie está en ese lugar y para que en el futuro alguien pueda describirla. En caso de que tengamos dudas incluso con el género, ponemos el género que consideramos más cercano y dos signos de interrogación como este: ??.

En algunos casos de especies que se encuentran en estudios taxonómicos colocamos mientras se definen los nombres así: **sp [grupo]**

La taxonomía y la secuencia de este catálogo sigue los autores que están especificados en nuestra publicación: lista Mariposas del Neotrópico Lista de Chequeo Suramérica.

## 2 Nombre anterior

Con la taxonomía revisada recientemente con el ADN, varias especies cambiaron el género o el nombre, en esos casos colocaremos el antiguo género o nombre con el texto en rojo.

## 3 Sexo

Cuando sea posible, ponemos el sexo del espécimen de la foto, ya sea porque tienen

## 1 Scientific name

The scientific name with genus, species and subspecies when possible.

The scientific names with the genus and sp correspond to species that have an unknown or doubtful identification, since there may be several species with doubts, it will be **sp1**, **sp2**, etc., once it is positively identified, the **sp** will be changed to the correct name of the species.

In the case of species not described to science, which do not yet have a name, we put **sp nov**. Please, if you can help us to complete or correct, write to the contacts.

In many places there are species without positive identification, we prefer to post photos of these species so that it is known that this species is in that place and so that in the future someone can describe it. In case we have doubts even with the gender, we put the gender that we consider closest and two question marks like this: ??.

In some cases of species found in taxonomic studies, we place the names as follows: **sp [group]**

The taxonomy and sequence of this catalog follows the authors that are specified in our publication: Neotropical Butterflies Checklist South America.

## 2 Former name

With the taxonomy recently revised with DNA, several species changed the genus or name, in those cases we will put the old genus or name with the red text.

## 3 Sex

Whenever possible, we put the sex of the specimen in the photo, either because they have sexual dimorphism or because in some cases, we observed the female laying eggs.

dimorfismo sexual o porque en algunos casos observamos a la hembra poniendo huevos.

#### 4 Fotógrafo

La abreviación del nombre del fotógrafo que tomó la foto reconoce su colaboración, por favor nos informan de cualquier error para su corrección.

#### 5 Información de la foto

Cuando sea posible, la información de la foto tendrá la abreviación del país, la localidad, la altitud y el mes/día en que se tomó la foto.

La mayoría de las fotos fueron tomadas de mariposas vivas en su entorno natural. El país donde fue tomado se indica con una abreviatura de dos letras. Esta abreviatura corresponde al código internacional utilizado como la terminación de Internet del código de cada país, por ejemplo. Brasil **BR**, Ecuador **EC**, Perú **PE** etc.

Después del código del país, ponemos una abreviatura de la localidad (consulte la tabla de códigos equivalentes para las localidades), luego la altitud donde se tomó la foto en metros sobre el nivel del mar y el mes y día, para dar una idea de la fecha que estuvo volando en este lugar.

De cada especie o subespecie escogemos las mejores fotos que la representen tanto ventral-dorsal como macho-hembra y estas fotos se usan en las guías para todos los países. Hay muchas especies que son comunes a casi todos los países y que no difieren significativamente en su forma o color entre los países, porque tratar de que la guía de un país o localidad solo tenga fotos tomadas en ese país o localidad se convierte en un proyecto titánico, sabiendo que tenemos más de 14.000 taxones para el Neotrópico.

#### 6 Rango

El rango de distribución de las especies con una abreviatura del nombre de los países de norte a sur, en algunos casos con especies que habitan en los Estados Unidos y México, utilizamos el

#### 4 Photographer

The abbreviation of the name of the photographer who took the photo acknowledges their collaboration, please inform us of any errors for correction.

#### 5 Photo information

Whenever possible, the photo information will contain the abbreviation of the country, the locality, the altitude, and the month/day the photo was taken.

Most of the photos were taken of live butterflies in their natural environment. The country where it was taken is indicated by a two-letter abbreviation. This abbreviation corresponds to the international code used as the Internet termination of the code of each country, for example. Brazil BR, Ecuador EC, Peru PE etc.

After the country code, we put an abbreviation of the locality (see the table of equivalent codes for localities), then the altitude where the photo was taken in meters above sea level and the month and day, to give an idea of the date they were flying at this location.

From each species or subspecies, we choose the best photos that represent it both ventral-dorsal and male-female and these photos are used in the guides for all countries. There are many species that are common to almost all countries and that do not differ significantly in their shape or color between countries, because trying to make the guide of a country or locality using only photos taken in that country or locality becomes a titanic project knowing that when we have more than 14,000 taxa for the Neotropics.

#### 6 Range

The distribution range of the species with an abbreviation of the name of the countries from north to south, in some cases with species that inhabit the United States and Mexico, we use the code of the southernmost states where the species are **Tx** Texas, **Chi** Chiapas. In big

código de los estados más australes donde están las especies **Tx** Texas, **Chi** Chiapas. En países grandes como Brasil, la parte superior del Amazonas, la parte inferior, etc. Colombia y otros países pueden tener una posición relativa a la cordillera de los Andes y esta información se coloca entre paréntesis después de la abreviación del país.

## **7** Secuencia de la foto

En la esquina superior derecha, hay un número consecutivo que ayuda a localizar o hacer referencia rápidamente a la posición de una especie en la guía.

Las fotos de especímenes se usan para mostrar algunas características que no son posibles de fotografiar en la naturaleza o para mostrar especies de las cuales aún no tenemos especímenes vivos. Además, en algunos casos se toman fotos dorsales de especies capturadas para identificarlas mejor, estas mariposas se liberan inmediatamente después de la foto. Las fotos de especímenes o fotos de baja calidad serán reemplazadas una vez que se tomen mejores fotos de estas especies, cualquier colaboración que permita completar la guía será bienvenida y el fotógrafo tendrá los créditos.

countries like Brazil, the upper part of the Amazon, the lower part, etc. Colombia and other countries may have a position relative to the Andes Mountain range and this information is placed in parentheses after the country abbreviation.

## **7** Photo Sequence

In the upper right corner, there is a consecutive number that helps to quickly locate or refer to the position of a species in the guide.

Specimen photos are used to show some features that are not possible to photograph in the wild or to show species for which we do not yet have live specimens. In addition, in some cases dorsal photos of captured species are taken to better identify them, these butterflies are released immediately after the photo. Photos of specimens or photos of low quality will be replaced once better photos of these species are taken, any collaboration that allows to complete the guide will be welcome and the photographer will have the credits.

# Nota importante

## Note

Estas guías y listados de chequeo son el resultado del trabajo de los autores iniciado en el año 2000. Para llegar al resultado que usted tiene en sus manos hemos contado con la generosa ayuda de muchos científicos expertos y de un gran número de fotógrafos.

Estas publicaciones son además una recopilación de bibliografía y registros fotográficos de muchas localidades en países del Neotrópico. Es importante que el usuario sepa que identificar algunas especies solamente a partir de fotografías tiene implícito un margen de error, por lo que es posible que las guías tengan algunas identificaciones incorrectas, o carentes de la precisión que desearíamos para todas, a pesar de nuestro esfuerzo y del conocimiento que los expertos consultados tienen.

Para elaborar las guías usamos fotos de mariposas tomadas en diferentes países. De estas fotos seleccionamos la que mejor representa a la especie. Por lo tanto, esa foto se utiliza en todas las guías de familia o en los diferentes países. Es por esta razón que es posible encontrar, por ejemplo, encontrar en una guía de Ecuador una mariposa fotografiada en Perú. Aunque nosotros tenemos la certeza de que dicha mariposa ha sido registrada en Ecuador, usamos la foto que mejor representa la especie, incluso si ha sido tomada en otro país. La finalidad es que el usuario tenga la mejor idea posible de cómo se ve la mariposa.

Conseguir o tomar fotos de buena calidad (enfocadas, en el plano correcto, libres de objetos distractores, alas sin deterioro, etc.) es difícil. Por esta razón seleccionamos

These guides and checklists are the result of the authors' work started in the year 2000. To achieve the result that you have in your hands, we have relied on the generous help of many expert scientists and a large number of photographers.

These publications are the product of collecting bibliographies and photographic records from many locations in Neotropical countries. It's important for the user to know that identifying some species only from photographs has an inherent margin of error. Therefore, it's possible that the guides may have some incorrect identifications or lacking the precision we would like for all, despite our effort and the knowledge of consulted experts.

To develop the guides, we used photos of butterflies taken in different countries. From these photos, we selected the one that best represents the species. Therefore, that photo is used in all family guides or in different countries. That's why it's possible, for example, to find in an Ecuador guide a butterfly photographed in Peru. Although we are certain that the butterfly has been recorded in Ecuador, we use the photo that best represents the species, even if it was taken in another country. The goal is for the user to have the best possible idea of how the butterfly looks.

Getting or taking good-quality photos (focused, in the correct plane, free of distracting objects, wings without damage, etc.) is difficult. Therefore, we carefully select photos that represent the species. In the example with *Anartia amathea*, it can be seen that although they are not identical, both represent the

cuidadosamente las fotos que representan la especie. En el ejemplo con la *Anartia amathea* se puede apreciar que, aunque no son idénticas ambas representan bien la especie para una guía de campo pese a que las fotos fueron tomadas en países diferentes y a miles de kilómetros de distancia. En el caso de subespecies de la misma especie que difieren mucho, tratamos de incluir a ambas.

species well for a field guide, even though the photos were taken in different countries and thousands of kilometers away. In the case of subspecies of the same species that differ greatly, we try to include both.

*Anartia amathea* foto tomada en Colombia  
Juan Guillermo Jaramillo

*Anartia amathea* foto tomada en Perú  
David Geale

# Familias de mariposas

## Butterfly families

Las mariposas pertenecen al orden Lepidóptera, el cual es el segundo grupo de insectos más numeroso en la naturaleza, con unas 160,000 especies clasificadas y un estimado de 250,000 especies en total. Este grupo es superado únicamente por los coleópteros. Los lepidópteros se caracterizan por tener escamas en las alas y se dividen tradicionalmente en dos grandes grupos: mariposas diurnas y mariposas nocturnas, también conocidas como polillas.

Una manera de distinguir estos dos grupos es observando la forma de las antenas. Las mariposas tienen las antenas terminadas en una maza, mientras que las polillas presentan antenas de diversas formas, a menudo plumosas. La diferencia entre volar de día o de noche no es suficiente para separar estos insectos, ya que hay excepciones: muchas polillas vuelan de día y algunas familias de polillas poseen maza en las antenas. Generalmente, las mariposas se posan con las alas cerradas y las polillas con las alas abiertas; sin embargo, esta distinción no siempre se cumple.

En el planeta existen unas 18,771 especies de mariposas, de las cuales aproximadamente 8,575 se encuentran en la región neotropical. El neotrópico abarca desde México hasta Argentina y es la región más biodiversa del mundo para muchas especies de plantas y animales.

Butterflies belong to the order Lepidoptera, which is the second most numerous group of insects in nature, with around 160,000 classified species and an estimated total of 250,000 species. This group is surpassed only by the beetles. Lepidopterans are characterized by having scales on their wings and are traditionally divided into two main groups: diurnal butterflies and nocturnal butterflies, also known as moths.

One way to distinguish these two groups is by observing the shape of their antennae. Butterflies have antennae that end in a club, while moths have antennae of various shapes, often feathery. The difference between flying during the day or at night is not sufficient to separate these insects, as there are exceptions: many moths fly during the day, and some families of moths have clubbed antennae. Generally, butterflies rest with their wings closed, and moths with their wings open; however, this distinction is not always accurate.

There are approximately 18,771 species of butterflies on the planet, of which around 8,575 are found in the Neotropical region. The Neotropics extend from Mexico to Argentina and is the most biodiverse region in the world for many species of plants and animals.

Datos de Colombia BioButterfly database al 24 septiembre 2024, datos del planeta Nieuwerkerken et al. (2011)

Las mariposas se clasifican en siete familias que agrupan especies con características comunes. La separación de estas familias se basa en la forma de las antenas (con o sin gancho), las venas de las alas, las uñas de las patas (simples o bifidas) o las características de las larvas. La siguiente tabla muestra la abundancia de

Butterflies are classified into seven families that group species with common characteristics. The classification of these families is based on the shape of the antennae (with or without a hook), the wing veins, the claws on the legs (simple or bifid), or the characteristics of the larvae. The following table shows the

géneros y especies en Colombia para cada familia y subfamilia, y su comparación con las especies a nivel mundial.

Por ejemplo, la familia HesperIIDae en Colombia cuenta con 300 géneros, lo que representa el 38.9% de todos los géneros del país, y 1,186 especies, que constituyen el 30.0% de las especies de mariposas en Colombia. A nivel mundial, la familia HesperIIDae tiene 4,113 especies, lo que representa el 21.9% del total de especies de mariposas. Al comparar estos datos con los de Colombia, se observa que nuestro país alberga en su territorio el 28.8% de los HesperIIDae del planeta. En total, en Colombia habita el 21.0% de las especies de mariposas conocidas en el mundo.

La tabla también nos permite comparar la abundancia de especies con las fotografías incluidas en la guía para cada subfamilia. No disponemos de imágenes de todas las especies, por lo que solicitamos colaboración para mejorar y completar la guía en futuras ediciones.

Cada familia de esta guía comienza con una tabla que presenta las subfamilias, tribus, subtribus y géneros de mariposas de la familia correspondiente, a modo de índice. Esto establece el orden en el que se muestran las fotografías y facilita la navegación por el contenido.

abundance of genera and species in Colombia for each family and subfamily, and their comparison with species worldwide.

For example, the HesperIIDae family in Colombia includes 300 genera, representing 38.9% of all genera in the country, and 1,186 species, which constitute 30.0% of the butterfly species in Colombia. Globally, the HesperIIDae family has 4,113 species, accounting for 21.9% of the total butterfly species. When comparing these data with those of Colombia, we can see that our country hosts 28.8% of the world's HesperIIDae within its territory. In total, Colombia is home to 21.0% of all known butterfly species in the world.

The table also allows us to compare the abundance of species with the photographs included in the guide for each subfamily. We do not have images of all species, so we are seeking collaboration to improve and complete the guide in future editions.

Each family in this guide begins with a table presenting the subfamilies, tribes, subtribes, and genera of butterflies within the corresponding family, serving as an index. This establishes the order in which the photographs are shown and facilitates navigation through the content.

Familia - Family

# Hedylidae

*Phellinodes hyacinthina*

Foto: Juan Guillermo Jaramillo

Familia – Family

# Hedylidae

La familia de los Hedylidae es comúnmente conocida como *mariposas-polilla* debido a la combinación de características propias de ambos grupos, incluyendo estados inmaduros similares a mariposas y apariencia y hábitos predominantemente nocturnos similar a las polillas. Se posan con las alas abiertas. Este grupo de lepidópteros vuela solo en el Neotrópico, en elevaciones hasta los 2.000 metros desde México hasta Argentina.

En el planeta solo hay descritas 39 especies de Hedylidae siendo la familia con el menor número de especies.

The family Hedylidae is commonly known as *American moth-butterflies* due to the combination of characteristics of both groups, including butterfly-like immature stages and moth-like appearance and predominantly nocturnal habits. They perch with open wings. This group of Lepidoptera flies only in the Neotropics, at elevations up to 2,000 meters from Mexico to Argentina.

There are only 39 species of Hedylidae described on the planet, being the family with the smallest number of species.

# Taxonomía familia Papilionidae

## Taxonomy family Papilionidae

En este listado colocamos todos los géneros que están en el Neotrópico para la familia, agrupados por subfamilia de tal manera que se pueda saber la clasificación taxonomica de un género y el orden en la guía o listado. Todos los géneros no necesariamente estan en un país o localidad. Se numeran para saber cuantos géneros hay en la

We have listed below all the Neotropic genera in the family within each subfamily, to help with locating a particular genus. All genera are not necessarily in one country or locality.

# Taxonomía familia Pieridae

## Taxonomy family Pieridae

En este listado colocamos todos los géneros que están en el Neotrópico para la familia, agrupados por subfamilia de tal manera que se pueda saber la clasificación taxonomica de un género y el orden en la guía o listado. Todos los géneros no necesariamente estan en un país o localidad. Se numeran para saber cuantos géneros hay en la

We have listed below all the Neotropic genera in the family within each subfamily, to help with locating a particular genus. All genera are not necessarily in one country or locality.

# Taxonomía familia Riodinidae

## Taxonomy family Riodinidae

En este listado colocamos todos los géneros que están en el Neotrópico para la familia, agrupados por subfamilia de tal manera que se pueda saber la clasificación taxonomica de un género y el orden en la guía o listado. Todos los géneros no necesariamente estan en un país o localidad. Se numeran para saber cuantos géneros hay en la

We have listed below all the Neotropical genera in the family within each subfamily, to help with locating a particular genus. All genera are not necessarily in one country or locality.

# Taxonomía familia Lycaenidae

## Taxonomy family Lycaenidae

En este listado colocamos todos los géneros que están en el Neotrópico para la familia, agrupados por subfamilia de tal manera que se pueda saber la clasificación taxonomica de un género y el orden en la guía o listado. Todos los géneros no necesariamente estan en un país o localidad. Se numeran para saber cuantos géneros hay en la

We have listed below all the Neotropical genera in the family within each subfamily, to help with locating a particular genus. All genera are not necessarily in one country or locality.

GUIDE País Clasificación hasta Genero

# Taxonomía familia Nymphalidae

## Taxonomy family Nymphalidae

En este listado colocamos todos los géneros que están en el Neotrópico para la familia, agrupados por subfamilia de tal manera que se pueda saber la clasificación taxonomica de un género y el orden en la guía o listado. Todos los géneros no necesariamente estan en un país o localidad. Se numeran para saber cuantos géneros hay en la

We have listed below all the Neotropic genera in the family within each subfamily, to help with locating a particular genus. All genera are not necessarily in one country or locality.

GUIDE País Clasificación hasta Género

# Bibliografía

## Bibliography

El Neotrópico por su diversidad de mariposas tiene mucha información publicada en libros y revistas especializadas, esta información nos ha ayudado a construir el catálogo de BioButterfly Database y a identificar muchas de nuestras fotos.

Inicialmente estábamos colocando la bibliografía en cada PDF tratando de asociar los artículos relevantes a cada PDF específico, básicamente si se relaciona con una familia, un país o una localidad. Decidimos hacer una bibliografía general combinada en formato PDF independiente con citas para todas las publicaciones que hemos estado usando de tal manera que sea útil para todos nuestros PDF y al mismo tiempo libere espacio en todos los PDF.

Con el siguiente vínculo acceda al PDF con la bibliografía.:

<https://www.butterflycatalogs.com/neotropical-bibliography.html>

Si se quiere profundizar en la bibliografía del Neotrópico, con artículos de mariposas desde México hasta Argentina, recomendamos un excelente documento recopilado por el Dr. Gerardo Lamas 2022 que se encuentra en la página de Butterflies of America BOA llamado: **An Annotated Bibliography of the Neotropical Butterflies and Skippers (Lepidoptera: Papilionoidea and Hesperioidea) Revised Electronic Edition** que se puede consultar en el siguiente vínculo:

<http://www.butterfliesofamerica.com/L/Biblio.htm>

The Neotropics, due to its diversity of butterflies, have a lot of information published in books and specialized magazines. This information has helped us to build the BioButterfly Database catalog and to identify many of our photos.

Initially we were placing the bibliography in each PDF trying to associate the relevant articles to each specific PDF, basically if it related to a family, a country or a locality. We decided to make a general combined bibliography as a separate PDF with citations for all the publications we have been using in such a way that it is useful for all our PDFs and at the same time it frees up space in all the PDFs.

With this link access the PDF with the bibliography:

<https://www.butterflycatalogs.com/neotropical-bibliography.html>

If you want to delve into the Neotropical bibliography, with articles on butterflies from Mexico to Argentina, we recommend an excellent document compiled by Dr. Gerardo Lamas 2022 found on the Butterflies of America BOA page called: **An Annotated Bibliography of the Neotropical Butterflies and Skippers (Lepidoptera: Papilionoidea and Hesperioidea) Revised Electronic Edition** which can be consulted at the following link:

<http://www.butterfliesofamerica.com/L/Biblio.htm>

Permanentemente estamos buscando información que nos ayude a completar la base de datos, especialmente cambios en la taxonomía de las especies, nuevas especies y especies por país o regiones. Agradecemos todas las referencias que nos puedan enviar.

We are constantly looking for information to help us complete the database, especially changes in the taxonomy of species, new species and species by country or region. We appreciate all the references that you can send us.

# Páginas web recomendadas

## Recommended web pages

Existen muchísimas fuentes de información sobre mariposas en Internet, sin embargo, presentamos acá una selección de aquellas recomendadas que puedan dar información complementaria a la bibliografía, las listas de chequeo o las guías, o pueden tener información útil para la identificación o el conocimiento de las mariposas.

### Identificación de mariposas - **Butterfly identification**

<https://www.butterflycatalogs.com> (libros de identificación para la región neotropical)  
[www.neotropicalbutterflies.com](http://www.neotropicalbutterflies.com) (Mariposas del Neotrópico)  
<https://www.butterfliesofamerica.com>  
fotografías de todos los tipos  
iNaturalis <https://www.inaturalist.org/home>  
ayuda con identificación de todos los seres vivos. Helps with IDs of living creatures.

# Agradecimiento a Fotógrafos

## Acknowledgement to Photographers

Gran parte de este trabajo se sustenta en la base de datos de fotografías de mariposas, y esto no sería posible sin la colaboración desinteresada de los fotógrafos y las instituciones que nos han ayudado. Por lo tanto, queremos expresar nuestro más sincero agradecimiento por su valiosa colaboración y hacerles saber que sus fotografías son hoy un importante aporte para la ciencia y la conservación.

Las fotos obtenidas de plataformas como iNaturalist han sido de gran utilidad para mejorar nuestras guías y listados. En algunos casos, no se especifica correctamente el nombre del fotógrafo, por lo que hemos utilizado el nombre proporcionado en la aplicación.

Agradecemos nuevamente a todos los fotógrafos que han contribuido con sus imágenes, ya que su generosidad y dedicación han enriquecido significativamente nuestro trabajo en el campo de las mariposas del neotrópico.

A significant part of this work relies on the butterfly photograph database, which would not be possible without the selfless collaboration of these individuals and institutions that have assisted us. Therefore, we would like to express our heartfelt gratitude for their collaboration and show them that their photos are now an important contribution to science and conservation.

Photos taken from platforms like iNaturalist have helped us continue improving our guides and listings. In some cases, the photographer's name is not accurately specified, so we have used the name provided in the application.

We once again thank all the photographers who have contributed their images, as their generosity and dedication have significantly enriched our work in the field of Neotropical butterflies.

# Como contribuir

## How to contribute

Con el proyecto mariposas del Neotrópico estamos elaborando un listado general de las mariposas del Neotrópico organizado por país, serán tres PDF que colocaremos sin costo en nuestras páginas web, inicialmente publicaremos los países de Sur América, luego México - Panamá y las Islas del Caribe.

El volumen de información para recopilar un listado útil de mariposas del Neotrópico es abrumador y demanda mucho tiempo, por ello, cualquier ayuda que nos puedan brindar será bienvenida.

El modelo de listado de mariposas será muy similar al de mariposas de Colombia que ya está publicado y se puede descargar en: <https://www.butterflycatalogs.com/>

Paralelamente al listado BioButterfly Database puede generar guías de mariposas que complementan los listados y sirven de herramienta educativa.

Queremos invitar a todo aquel que quiera colaborar en este proyecto a que nos envíe sus comentarios y correcciones, datos donde nos pueden ayudar a corregir o mejorar incluyen:

- Especies y subespecies que faltan en la base de datos
- Especies y subespecies que faltan en un país o región
- Subespecies que cambian al nivel de especies
- Sinónimos de nombres, o especies que deben salir del listado

We are preparing a general list of the Neotropical butterflies organized by country. There will be three PDFs that we will place free of charge on our web pages, initially we will publish the countries of South America, then Mexico - Panama and the Caribbean Islands.

The volume of information to compile a useful list of Neotropical butterflies is overwhelming and time-consuming, so any help you can give us is welcome.

The butterfly list model will be very similar to the one for butterflies in Colombia, which is already published and can be downloaded at: <https://www.butterflycatalogs.com/>

We want to invite anyone who wants to collaborate in this project to send us their comments and corrections. Data where they can help us correct or improve include:

- Species and subspecies missing from the database
- Species and subspecies missing from a country or region
- Subspecies that change at the species level
- Synonyms of names, or species that must be removed from the list
- Errors in spelling, authors, dates, parentheses in authors, etc.
- Expansion or change of general ranges
- Changes, suggestions or errors in the taxonomic part
- Bibliography to be added or taken into account

- Errores de ortografía, de autores, de fechas, de paréntesis en autores, etc.
- Ampliación o cambio de rangos generales
- Cambios, sugerencias o errores en la parte taxonómica
- Bibliografía que se debe agregar o tener en cuenta
- Bibliografía que aporte especies que no tenemos registradas en la Base de Datos
- Bibliografía que cambie el rango para un taxón
- Correcciones, ampliaciones o sugerencias para el texto y las tablas
- Fotos de especies de cada país que nos sirvan para hacer las carátulas del documento y de los diferentes capítulos (todas las fotos llevan los créditos del fotógrafo)
- Fotos mal asignadas al fotógrafo.
- Fotos de especies o subespecies que nos falten en las guías o que mejoren las que ya están.

Nuestra meta final es entregar un listado y una guía con las especies y subespecies de mariposas para cada país del Neotrópico de tal manera que sirva de herramienta de educación, promoción y conservación regional.

Aunque la información de cada país estará en el listado general, actualmente BioButterfly Database puede generar el listado independiente para cada país, desde México hasta Argentina, (países del Caribe solo están disponibles individualmente por el momento Cuba, Hispaniola y Trinidad y Tobago) así que si alguien requiere el listado específico de un país nos lo puede solicitar. Estos listados preliminares no estarán completos, pero pueden ser útiles.

Antes de publicar en nuestra página <https://www.butterflycatalogs.com/> el listado independiente y completo de cada

- Bibliography that contributes species that we do not have registered in the Database
- Bibliography that changes the range for a taxon
- Corrections, extensions or suggestions for the text and tables
- Photos of species from each country that we use to make the covers of the document and the different chapters (all photos bear the credits of the photographer)
- Photos misattributed to the photographer.
- Photos of species or subspecies that are missing from the guides or that improve upon those that are already present.

Our final goal is to deliver a list with the species and subspecies of butterflies for each country of the Neotropics in such a way that it serves as a tool for education, promotion and regional conservation.

Although the information of each country will be in the general list, currently BioButterfly Database can generate the independent list for each country, from Mexico to Argentina, (Caribbean countries are only available individually at the moment Cuba, Hispaniola and Trinidad and Tobago) so if someone requires a specific list of a country, they can request it. These preliminary listings will not be complete and are identified by having covers with stamps of butterflies from different countries.

Before publishing on our page <https://www.butterflycatalogs.com/> the independent and complete list of each country we want the information to be more complete, so we invite anyone who wants to sponsor a country to contact us, this help is essential. We have a methodology that allows us to collect and make changes quickly. Furthermore, as it is an electronic publication, it can be modified quickly and at no cost.

The best way to contribute photos is to upload them to the iNaturalist platform providing as much information as possible

país queremos que la información esté más completa así que invitamos a quien quiera apadrinar un país a que nos contacte, esta ayuda es fundamental. Tenemos una metodología que nos permite recopilar y hacer los cambios rápidamente. Además, al ser una publicación electrónica puede ser modificada rápido y sin costo.

La mejor manera de colaborar con fotografías es subirlas a la plataforma iNaturalist proporcionando todos los datos posibles y ojalá utilizado un atributo Creative Commons que exija dar el crédito al fotógrafo, pero sin restricciones de autoría. <https://www.inaturalist.org>

Comuníquese con Kim Garwood o Juan Guillermo Jaramillo para coordinar la colaboración, ponemos a disposición nuestro tiempo y la voluntad de continuar gratis con este trabajo. Nuestra manera de trabajar consiste en compartir con la mayor cantidad de personas la información, para completarla, mejorarla y volver a compartir, preferimos tener y compartir información con un porcentaje de información equivocada o incompleta a quedarnos con la información en los discos de nuestros computadores.

Kim Garwood: [kimgrwd@sbcglobal.net](mailto:kimgrwd@sbcglobal.net)

Juan Guillermo Jaramillo:  
[arcas1956@gmail.com](mailto:arcas1956@gmail.com)

and hopefully using a Creative Commons attribute that requires credit to the photographer but no authorship restrictions.

<https://www.inaturalist.org>

Contact Kim Garwood or Juan Guillermo Jaramillo to coordinate the collaboration, we make our time and willingness to continue this work for free. Our way of working is to share the information with as many people as possible, to complete it, improve it and share it again. We prefer to have and share information with a percentage of wrong or incomplete information rather than keep the information on the disks of our computers.

Kim Garwood: [kimgrwd@sbcglobal.net](mailto:kimgrwd@sbcglobal.net)

Juan Guillermo Jaramillo:  
[arcas1956@gmail.com](mailto:arcas1956@gmail.com)

# Agradecimientos

## Acknowledgments

Queremos dar las gracias a todos los colaboradores, científicos, aficionados y fotógrafos que han contribuido en la realización de estas guías y listados de mariposas del neotrópico. Sin ellos, no habrían sido posibles completar estas publicaciones.

Agradecemos especialmente a los Doctores Gerardo Lamas y Olaf Mielke, quienes han dedicado su vida a la investigación y educación sobre las mariposas del neotrópico. En la familia HesperIIDae agradecemos al experto Bernard Hermier por sus innumerables horas y páginas de explicaciones y correcciones.

Al Dr. Keith Willmott por sus consejos en la elaboración de estos trabajos e identificación de fotos. A Jean-Claude Petit por las múltiples adiciones de especies y correcciones para Ecuador. Al Dr Gerardo Lamas y Mike McInnis por la información sobre el parque nacional del Manu.

Agradecemos a los siguientes expertos que generosamente han ayudado con información y en la identificación de fotos que han servido de soporte al listado (en orden alfabético): Stéphane Attal, Dr. Andrew Brower, Prof. James Mallet, Andrew Neild, Gregory Nielsen, Dr. Tomasz Pyrcz, Dr. Robert Robbins, Julián Salazar y Aaron Soh.

A Andrés Arenas por sus consejos y ayuda en la elaboración de la base de datos. A Andrew Neild por sus fotos, recomendaciones y sugerencias. A David Geale por sus innumerables aportes fotográficos. A Juan Esteban Berrio por su ayuda en el procesamiento de fotos.

We would like to thank all collaborators, scientists, enthusiasts and photographers who have contributed to the creation of these guides and checklist of Neotropical butterflies. Without them, these publications would not have been possible to complete.

We especially thank Doctors Gerardo Lamas and Olaf Mielke, who have dedicated their lives to research and education on Neotropical butterflies. In the family HesperIIDae, we thank expert Bernard Hermier for his countless hours and pages of explanations and corrections.

We also thank Dr. Keith Willmott for his advice in the creation of these works and identification of photos, Jean-Claude Petit for his multiple additions of species and corrections for Ecuador, Dr Gerardo Lamas and Mike McInnis for their information on the Manu National Park.

We thank the following experts who generously helped with information and identification of photos that supported the checklist (in alphabetical order): Stéphane Attal, Dr. Andrew Brower, Prof. James Mallet, Andrew Neild, Gregory Nielsen, Dr. Tomasz Pyrcz, Dr. Robert Robbins, Julian Salazar, and Aaron Soh.

We thank Andrés Arenas for his advice and help in creating the database, Andrew Neild for his photos, recommendations, and suggestions, David Geale for his countless photographic contributions, Juan Esteban Berrio for his help in photo processing.

We thank Blanca Huertas and Cristóbal Ríos-Málaver, colleagues in the Colombia checklist that was the foundation for this work, Gabriel Rodríguez for his recommendations and

A Blanca Huertas y Cristóbal Ríos-Málaver compañeros en el listado de Colombia que fue la primera piedra para este trabajo. A Gabriel Rodríguez por sus recomendaciones y por los múltiples datos geográficos de su colección de mariposas. Al Dr. Juan José Arango por su motivación y sus recomendaciones técnicas y editoriales, a Rodrigo Bernal y Daniel Jaramillo F. por sus consejos y colaboración. A Maristela Zamoner por sus traducciones al portugués y ayuda con la información de Brasil. A Michael Campos por su apoyo y su colaboración.

Al Museo de Historia Natural de Londres (Natural History Museum) y al McGuire Center de la Universidad de la Florida por permitirnos el acceso a sus colecciones, ejemplares y datos. A Blanca Huertas por todos sus consejos y recomendaciones.

A los creadores de las aplicaciones gratis Gimp, PDF24 Tools, ChatGPT de OpenAI, con las que ha sido posible ensamblar y corregir estos documentos.

A la aplicación iNaturalist proyecto de ciencia ciudadana y red social en línea de naturalistas, científicos ciudadanos, y biólogos basada en el concepto de mapeo e intercambio de observaciones de biodiversidad, algunos registros en iNat han permitido ingresar a BioButterfly Database nuevas especies para Colombia y otros países.

Especial agradecimiento a las familias de los autores (Adriana, Sarita, Jerónimo y Alejandro), por su apoyo durante la realización de este proyecto.

geographical data from his butterfly collection, Dr. Juan José Arango for his motivation and technical and editorial recommendations, Rodrigo Bernal and Daniel Jaramillo F. for their advice and collaboration, Maristela Zamoner for her translations to Portuguese and help with information from Brazil, Michael Campos for his support and collaboration.

We thank the Natural History Museum of London and the McGuire Center at the University of Florida for allowing us access to their collections, specimens, and data. We thank Blanca Huertas for all her advice and recommendations.

We thank the creators of the free applications Gimp, PDF24 Tools, ChatGPT from OpenAI, with which it was possible to assemble and correct these documents.

We thank the iNaturalist application, a citizen science and online social network of naturalists, citizen scientists, and biologists based on the concept of mapping and sharing observations of biodiversity, some records in iNat have allowed new species to be entered into the BioButterfly Database for Colombia and other countries.

A special thank you to the families of the authors (Adriana, Sarita, Jerónimo and Alejandro), for their support during the creation of this project.

# Guías y listados de chequeo

## Guides & Checklists

En <https://www.butterflycatalogs.com> se pueden descargar gratuitamente listados y guías de mariposas del Neotrópico, incluyendo Brasil, Colombia, Ecuador, Perú y Bolivia. También puedes solicitar a los autores listados o guías específicas para países desde México hasta Argentina.

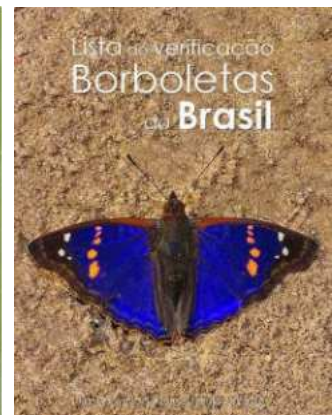

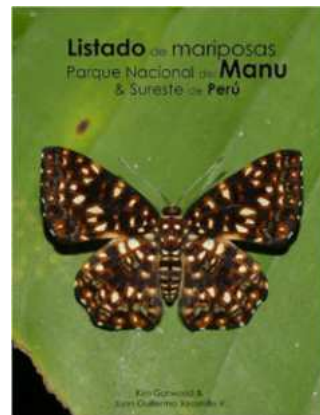

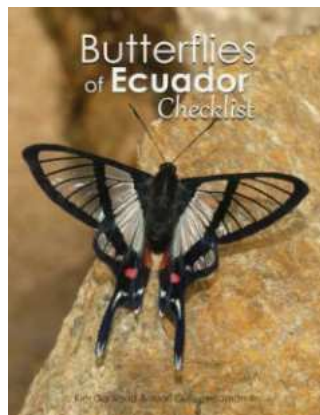

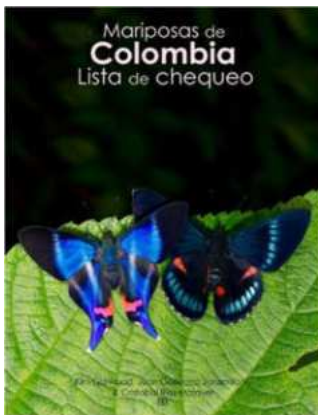

At <https://www.butterflycatalogs.com>, you can download free butterfly checklists and guides for the Neotropics, including Brazil, Colombia, Ecuador, Peru, and Bolivia. You can also request specific checklists or guides for countries from Mexico to Argentina.

## Listas de chequeo

### Checklists

Estas listas de chequeo se elaboran como documentos independientes de las guías fotográficas, especialmente para países o regiones con una gran cantidad de especies de mariposas.

These checklists are created as separate documents from the photographic guides, specifically for countries or regions with a large number of butterfly species.

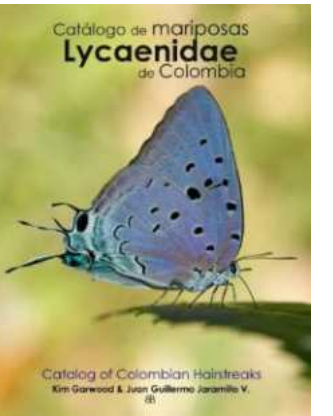

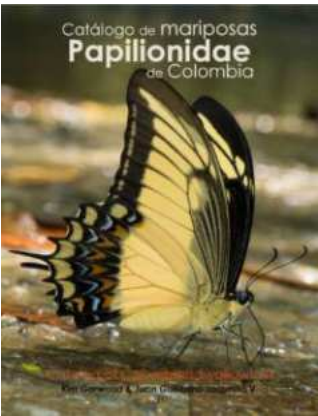

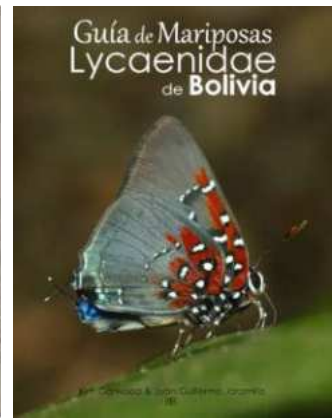

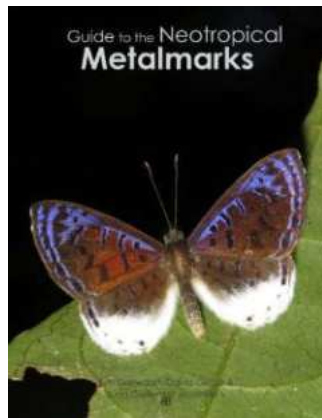

## Guías de familias

### Family guides

Las guías fotográficas para familias están diseñadas inicialmente para cubrir una familia en todo el Neotrópico. Luego, se pueden generar versiones específicas para un país en particular.

Photographic family guides are initially designed to cover a family across the entire Neotropics. Later, they can be adapted for specific countries.

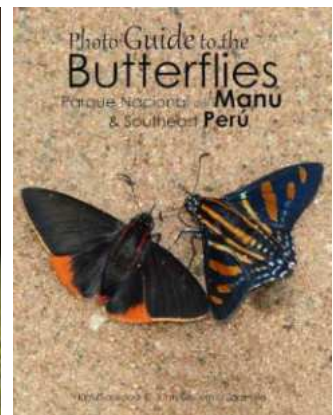

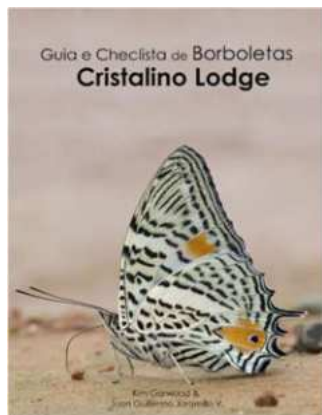

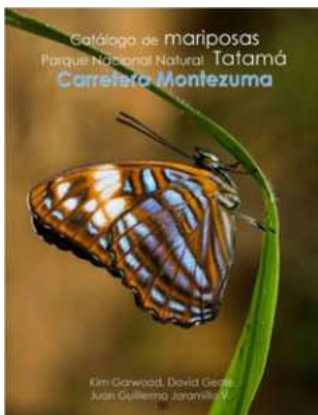

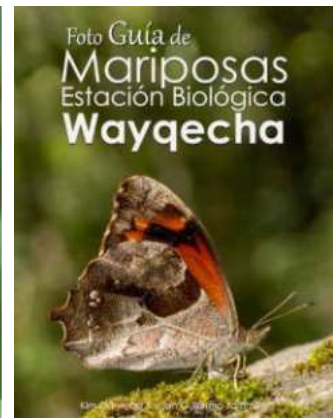

## Guías de localidades Locality guides

Estas guías incluyen fotografías de especies y subespecies de una localidad específica, acompañadas por el respectivo listado de chequeo.

These guides include photographs of species and subspecies from a specific locality, accompanied by the respective checklist.

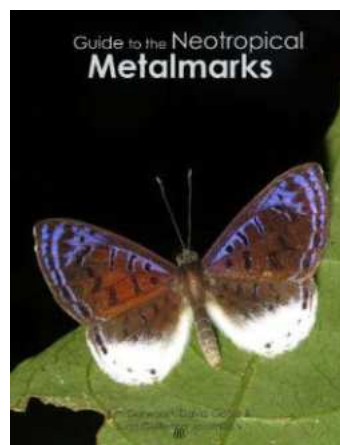

## Listas & guías del Neotropico

### Neotropic checklist & guides

Nuestra base de datos recopila todas las especies y subespecies del Neotrópico. A partir de esta información, seleccionamos las especies presentes en cada país, lo que permite generar listas o guías específicas por país o por familia.

Our database compiles all the species and subspecies of the Neotropics. From this information, we select the species present in each country, allowing us to create country-specific lists or family-specific guides.

# Guías por demanda

## Guides on demand

Estas guías personalizadas apoyan los esfuerzos de personas o entidades para crear guías fotográficas específicas de una localidad o región. También es posible solicitar guías específicas de géneros, subtribus, tribus, subfamilias, entre otros.

These custom guides support individual or organizational efforts to create specific photographic guides for a locality or region. You can also request guides focused on specific genera, subtribes, tribes, subfamilies, and more.

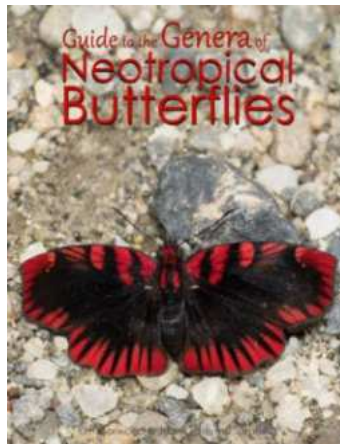

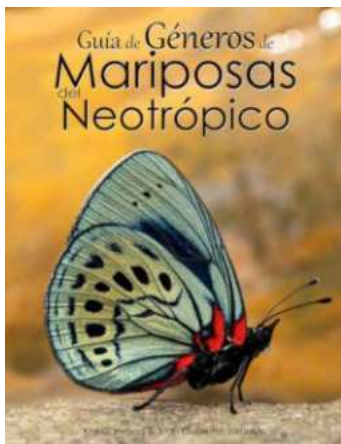

# Guía de géneros

## Genera guide

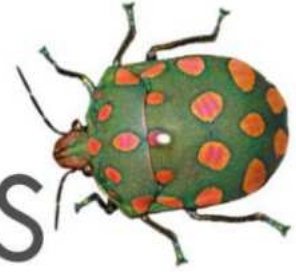

Esta guía es ideal para quienes se inician en el mundo de las mariposas, ya que les ayuda a familiarizarse con las familias, formas, colores y los últimos cambios taxonómicos.

This guide is ideal for those entering the world of butterflies, helping them familiarize themselves with families, shapes, colors, and the latest taxonomic changes.

# El Colapso de los Insectos

Estos pequeños seres desempeñan funciones importantes en los ecosistemas del mundo, como la polinización de las plantas y la eliminación de residuos orgánicos, además de ser el alimento para muchas especies animales. Sin embargo, la población de insectos está disminuyendo a un ritmo alarmante, lo que representa una amenaza para la estabilidad de la vida en el planeta y la seguridad alimentaria de la humanidad.

Los factores que contribuyen a la disminución de la población de insectos son variados, incluyendo el uso intensivo de la tierra para la agricultura y la ganadería, la urbanización y el cambio climático. Además, el aumento en el uso de agroquímicos es una causa importante, lo que ha llevado en algunos lugares a una disminución en la abundancia de especies de más del 60% y una disminución del 27% en el número de especies. En Europa, los insectos voladores han disminuido en un 80%, lo que afecta directamente la población de aves. Se estima que la tasa de extinción de los insectos es 8 veces superior a la de mamíferos, reptiles y aves.

Los insectos son imprescindibles para el buen funcionamiento de los ecosistemas, polinizan plantas, controlan las plagas, reciclan materia orgánica, ayudan en la formación del suelo. Sin ellos, la cadena alimentaria y el equilibrio ecológico pueden verse seriamente comprometidos.

La pérdida de insectos como las mariposas, polillas y abejas podría afectar la salud humana y la seguridad alimentaria, ya que el 75% de los cultivos alimentarios dependen de los insectos polinizadores. No se conoce el punto de no retorno en que las poblaciones puedan colapsar sin posibilidades de retorno, por lo que es necesario tomar medidas inmediatas para proteger a estos importantes seres vivos.

Es importante que cada persona haga su parte para proteger a los insectos, incluyendo las mariposas. Podemos comenzar plantando especies nativas, dejando y creando rastrojo, disminuyendo la frecuencia en que se corta el césped y reduciendo o eliminando el uso de pesticidas en los jardines. También es necesario crear jardines funcionales en las áreas urbanas y no consumir alimentos que provengan o estimulen la deforestación.

Además, es importante que la población y los gobiernos de todo el mundo tomen medidas para proteger a los insectos. La educación y la concientización sobre la importancia de los insectos en los ecosistemas locales son fundamentales para garantizar su supervivencia. Los gobiernos también deben tomar medidas para limitar el uso de agroquímicos y fomentar la protección de las áreas naturales.

Esta guía de mariposas es un legado valioso porque varios de los sitios donde fueron registradas y fotografiadas las especies **ya están destruidos** y por lo tanto estas especies ya no existen en esa localidad específica. La guía ilustra la asombrosa diversidad de mariposas de Colombia para motivar su conocimiento y conservación, pero especialmente para que evitemos su desaparición para las generaciones futuras

Recomendamos ver el artículo de Reuters donde se amplía la información resumida en este capítulo:

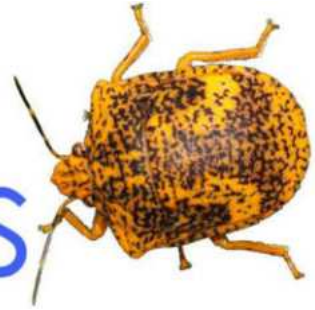

<https://www.reuters.com/graphics/GLOBAL-ENVIRONMENT/INSECT-APOCALYPSE/egpbykdxjvq/>

Fotos de insectos Juan Guillermo Jaramillo

# The Collapse of the Insects

These small creatures play important roles in the world's ecosystems, such as pollinating plants and eliminating organic waste, as well as being food for many animal species. However, the insect population is decreasing at an alarming rate, posing a threat to the stability of life on the planet and to humanity's food security.

Factors contributing to the decline in the insect population are varied, including intensive land use for agriculture and livestock, urbanization, and climate change. Additionally, the increased use of agrochemicals is a major cause, leading to a decline in species abundance of over 60% in some areas and a decrease of 27% in the number of species. In Europe, flying insects have decreased by 80%, directly affecting the bird population. The extinction rate for insects is estimated to be 8 times higher than that for mammals, reptiles, and birds.

Insects are essential for the proper functioning of ecosystems, pollinating plants, controlling pests, recycling organic matter, and helping in soil formation. Without them, the food chain and ecological balance can be seriously compromised.

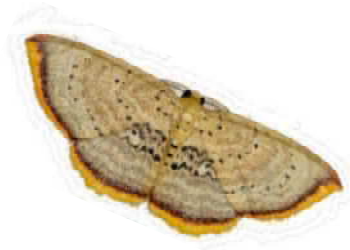

The loss of insects such as butterflies, moths, and bees could affect human health and food security since 75% of food crops depend on pollinating insects. The point of no return at which populations may collapse beyond recovery is unknown, making immediate action necessary to protect these important living beings.

It is important for each person to do their part to protect insects, including butterflies. We can start by planting native species, leaving, and creating weedy patches, reducing the frequency of lawn mowing, and reducing or eliminating pesticide use in gardens. It is also necessary to create functional gardens in urban areas and avoid consuming foods that come from or encourage deforestation.

Furthermore, it is important for populations and governments around the world to take action to protect insects. Education and awareness about the importance of insects in local ecosystems are crucial to ensure their survival. Governments must also take measures to limit the use of agrochemicals and promote the protection of natural areas.

This butterfly guide is a valuable legacy because several of the sites where the species were recorded and photographed **have already been destroyed**, and therefore these species no longer exist in that specific location. The guide illustrates the astonishing diversity of butterflies in Colombia to promote their knowledge and conservation, but especially to prevent their disappearance for future generations.

We recommend seeing the Reuters article where the information summarized in this chapter is expanded:

<https://www.reuters.com/graphics/GLOBAL-ENVIRONMENT/INSECT-APOCALYPSE/egpbykdxjq/>

Insect photos by Juan Guillermo Jaramillo

# CADA MARIPOSA CUENTA

Invitamos a los usuarios de nuestras guías de mariposas a compartir sus observaciones de cualquier ser vivo, especialmente mariposas, subiéndolas a la aplicación iNaturalist. Esta plataforma permite a las personas registrar sus hallazgos en la naturaleza y colaborar en la identificación de especies, ayudando a ampliar nuestro conocimiento sobre la biodiversidad de los países neotropicales, desde México hasta Argentina.

Cada observación es valiosa, independientemente del color, tamaño o forma de la mariposa. Es importante registrar todas las especies, incluidas aquellas de colores opacos como marrón o gris, ya que son tan significativas para la ciencia como las de colores brillantes y llamativos. Contribuir con tus fotos a iNaturalist no solo nos ayuda a descubrir nuevas especies para la ciencia, sino también a identificar nuevas especies para muchos países.

Además, te recomendamos que subas tus fotos con una licencia Creative Commons del tipo “Attribution” (BY) o “Attribution-NonCommercial” (BY-NC), para que se te reconozca como el autor de las imágenes y para evitar su uso comercial si así lo prefieres.

Al participar en iNaturalist, estás contribuyendo a la conservación y conocimiento de la biodiversidad y ayudando a la comunidad científica y a los gestores de recursos naturales a comprender cuándo y dónde ocurren diferentes organismos. ¡Únete a esta red global y conviértete en un ciudadano científico!

Para más información, visita [iNaturalist](https://www.inaturalist.org).
